

Vidiot

The standalone, patchable analog video instrument.

Vidiot is the first standalone video synthesis instrument from LZX Industries, designed in collaboration with video synthesis pioneer Dan Bucchiano. Capable of analog shape and pattern generation, external video processing, colorization, audiovisualization, keying, and much more.

- **A Complete Visual Instrument.** Vidiot is a complete instrument for analog video synthesis and processing. Everything you need to connect to a display and create video art is in the box.
- **Past Tech Made New.** We worked with video synthesis visionary Dan Bucchiano to bring the design philosophy of the 1970's into a totally new and groundbreaking device for video artists.
- **Modular Synthesis Compatibility.** Vidiot is fully compatible with all existing LZX EuroRack video synth modules. Like our modules, any audio or control voltage source can be patched to any of its 13 patch inputs.
